In Brief. The Coronavirus Aid, Relief, and Economic Security (CARES) Act (P.L. 116-136) provides federal funding for states to operate a short-time compensation program (STC) as a layoff aversion program.

For businesses, an STC policy could be a way to help pay staff and avoid layoffs.

STC programs enable individuals to receive partial earnings (through reduced hours) and partial unemployment (related to a percent reduction in hours) in lieu of being laid off (i.e., avoiding the loss of health insurance and retirement coverage as well as the need to receive full unemployment payments).

For states that have established STC programs through state legislation, federal funding covers 100 percent of the cost through December 31, 2020. For states that are not able to pursue a legislative solution (e.g., their state session has already adjourned), state labor agencies can pursue a policy agreement that is approved by the U.S. Department of Labor and the CARES Act provides 50% funding to cover the cost.

- $100 million is available through the U.S. Department of Labor to help states implement and improve STC programs.

How STC Programs Work

Under State STC programs, employers interested in participating submit an application to their state labor agency for approval. For employees, instead of being laid off, they would typically work a reduced set of hours per week. In return, they would receive a percentage of their unemployment compensation. For example, if an employee typically works 40 hours per week and his/her hours are reduced to 32 hours per week (a 20 percent reduction), then the employee would receive reduced earnings (based on a 32 hour week) and 20 percent of his/her unemployment compensation.

For employers, an STC program can help them get by a temporary period where otherwise employees may need to be laid off. Reducing hours instead of imposing layoffs helps retain a workforce for recovery periods. For employees, having a job (even at reduced hours) is often more security than being unemployed.

States with Current STC Programs

Currently, 27 states have STC programs that comply with federal guidance including Virginia, which passed legislation in April that will go into effect July 1, 2020. California has the oldest STC program enacted in 1978 followed by Arizona, Arkansas, Florida, Kansas, Louisiana, Maryland, Missouri, New York, Oregon, Texas, Vermont, and Washington that all enacted STC programs in the 1980s. Other state programs followed.

Use of STC Programs

Use of STC programs varies, with cyclical receipt that increases as unemployment rises. The highest number of STC participants was 288,619 in 2009 during the Great Recession. Participation in STCs was greater during the 2007-2009 recession compared to the 2001 recession. The U.S. Department of Labor estimates that 570,000 jobs were saved through STC programs operating between 2008-2015.

History. The concept of STC programs is not new. Dr. Frank Schiff, vice president and chief economist at the Committee for Economic Development (CED) from 1969 – 1986 was one of the primary authors of the construct of work sharing programs and repeatedly testified before Congress in the 1970s and 1980s.

- The first federal temporary STC program was enacted in 1982 as part of the Tax Equity and Fiscal Responsibility Act (TEFRA, P.L. 97-248).
- STCs were permanently authorized as part of the Unemployment Compensation Amendments Act of 1992 (P.L. 102-318).
- The Middle Class Tax Relief and Job Creation Act of 2012 (P.L 112-96) clarified some of the STC definitions and rules and provided additional incentives to states to operate STC programs.
The CARES Act and STC Programs

Under the CARES Act, Congress broadened the safety net for those who are unemployed to include a new Pandemic unemployment assistance program (PUA) to provide support for individuals excluded from state unemployment programs such as the self-employed. The CARES Act also included a new $600 per week supplement to unemployment compensation (through July 31, 2020) to anyone who receives state unemployment compensation as well as those who receive unemployment through the new PUA program.

In states that have STC programs, individuals who receive unemployment benefits also will receive the new $600 per week supplemental payment (through July 31).

Employee Health and Retirement Benefits

Another advantage of STC programs beyond layoff aversion is that federal law requires state STC programs to require employers to certify that if the employer provides health benefits and retirement benefits to any employee whose hours have been reduced through an STC program that such benefits will continue to be paid for employees as though the work week had not been reduced. The only exception is if an employer cancels health insurance and retirement for all employees (e.g., those employees who are not participating in an STC program).

The retention of health insurance coverage and retirement benefits is important as typically when individuals are no longer employed, such coverage is terminated. Therefore, participation in STC programs not only provides a monetary safety net for employees but also a benefit protection not available to the unemployed.
